# *Problems with the Proposed Homestead Constitutional Amendment*

By John L. Knapp

In 2007, both houses of the General Assembly overwhelmingly approved Senate Joint Resolution 354, providing for a constitutional amendment that would empower local governments to provide tax relief for owner-occupied single-family housing.<sup>1</sup> The homestead amendment, as it is popularly known, contains the following language:

The General Assembly may by general law allow the governing body of any county, city, or town to exempt or partially exempt from real property taxation or provide for the deferral of real property taxes, within such restrictions and upon such conditions as may be prescribed by the governing body by ordinance, of up to twenty percent of the value of residential or farm property that is designed for continuous habitation and is occupied as the primary dwelling of the individual owners.

To amend the constitution it will be necessary for the 2008 General Assembly, which will be the first regular session after the last general election, to again pass the proposed

*John L. Knapp*

amendment, with no change in wording, in both houses. Passage appears very likely. In that case, the amendment will be offered to voters on the November 2008 ballot.

Constitutional provision for tax relief was an issue in the 2005 gubernatorial contest. The Democratic nominee, Timothy M. Kaine, endorsed a proposal similar to SJR 354. The Republican nominee, Jerry W. Kilgore, proposed a cap of 5 percent on annual increases of assessed value of residential owner-occupied properties.

At the time of the election, housing values were rising rapidly, and they continued to do so until 2007. According to the House Price Index (HPI) for Virginia, the annual rate of increase peaked at a blistering 21.2 percent in the second quarter of 2005.<sup>2</sup> For the most recent period available, the third quarter of 2007, the annual rate was 2.9 percent, with prospects for very low growth

*Appreciation of house values does not automatically result in higher tax collections from the real property tax.*

or decline in the next eighteen months. The inflation in house values was not uniform throughout the state. Relative appreciation was greatest in the Northern Virginia, Hampton Roads, and Charlottesville metropolitan areas. The HPI understates the earlier growth and the subsequent decline in the rate of growth because of its omission of transactions financed with sub-prime mortgages and with mortgages of more than \$417,000, segments of the market that ideally should be included. Nevertheless, the HPI is the only measure available for states and all metropolitan areas.<sup>3</sup>

Appreciation of house values does not automatically result in higher tax collections from the real property tax. Local governing bodies set the tax rate each year. When assessed values rise due to increases in property values, local governments can adjust their tax rate so that tax collections do not rise. However, local governments usually take advantage of part of the increase in assessed values by lowering the tax rate, but using a reduced rate that still raises more revenue. This explains why in recent years levies grew at a substantial rate, about 10 percent annually after 2000, while assessed values, including new properties, grew even faster (Figure 1).

The increase in assessed values was much greater for single-family residential property than for other types (Table 1). Most of the

**Figure 1: Annual Change in Virginia Assessed Values and Levies, 1991 - 2006**

Source: Annual reports of the Virginia Department of Taxation

The disparity in growth rates for different types of property is not unusual. Historical data for the U.S. since 1994 show that prices for different types of property have not moved in concert. Over the full period from 1994 to 2006 the price index for single-family residences grew slower than those for office buildings, apartments, and industrial property and faster than the index for retail property.<sup>5</sup>

### Analysis of the Proposal's Effects

How would the proposed amendment impact local governments? The answer is not straightforward because there are many possibilities, ranging from no impact if no local governing body would adopt a homestead exemption to

**Table 1: Percentage Increase in Virginia Total Taxable Assessed Value by Type of Property, 2000 to 2006**

Type of Property	Percentage Increase
Single-family residential, owner and renter-occupied	148.7
Multifamily residential, owner and renter-occupied	92.4
Commercial	68.2
Agriculture (use-value where applicable)	61.1
Total	123.2

Source: Unpublished data from the Virginia Department of Taxation

gain in single-family residential values was due to higher prices. Only about 10 percent of the increase was attributable to new construction.<sup>4</sup>

<sup>3</sup> The S&P/Case Shiller Index, that is available for the nation and major metropolitan areas, shows a recent decline in national prices versus the small increase shown by the HPI. See Andrew Leventis, "A Note on the Differences Between the OFHEO and S&P/Case-Shiller House Price Indexes," Office of Federal Housing Enterprise Oversight (July 25, 2007) [www.ofheo.gov/media/research/notediff2.pdf](http://www.ofheo.gov/media/research/notediff2.pdf) (1/16/08).

<sup>4</sup> From 2000 to 2006 single-family residential assessed values grew by \$404.1 billion while the value of private new residential construction of single-family units totaled \$39.5 billion. Sources: Virginia Department of Taxation unpublished data and Bureau of the Census data on housing units

a major impact if all local governments were to adopt the maximum exemption. The most probable outcome is that many local governments would provide an exemption, although not necessarily the full 20 percent. This would not occur immediately but would be phased in over a number of years as governing bodies acceded to homeowner pressure and emulated tax relief provided by neighboring jurisdictions.

authorized by building permits. <http://www.census.gov/const/www/C40/table2.html> (1/16/08).

Bureau of the Census, American Housing Survey for 2005 <http://www.census.gov/hhes/www/housing/ahs/ahs05/tab1a1.html> (1/15/08).

NOTE: For this calculation the author assumed the share of single-family property occupied by owners is 86.2 percent, the national proportion reported by the Census Bureau for 2005. Unrounded tax rates were used in the calculations.

The type of exemption that would be adopted by individual localities is unknowable. Some localities might provide a blanket percentage exemption for all homeowners; should the state enabling statute permit them, others might impose restrictions related to the length of time of ownership, age of owner, and owner income and net worth. Once a local government provided an exemption, it is unlikely the governing body would rescind it in a later year since homeowners, who are well represented among voters, would assume a sense of entitlement about the assessment relief. Furthermore, it is possible, but not likely, that local governments would adopt the deferral provision. Under existing state law, local governments can offer deferral but none have done so.<sup>6</sup> Apparently, deferral is not popular with voters because it does not reduce taxes—it merely postpones them.

Because of the many plausible assumptions that can be made about local government behavior if the amendment is approved, it is not possible to estimate their foregone revenue

unless one assumes that all local governments adopt the 20 percent maximum exemption. Even though that outcome is unlikely, an estimate based on that premise is instructive. **Table 2** shows the statewide impact of the proposed amendment based on 2006 data, the most recent available. Owners of single-family, owner-occupied, residential properties paid \$4,943 million in taxes, and owners of all other real property—residential rental property, business property, commercial property, and farm property—paid \$2,694 million in taxes. Under the homestead amendment, all localities could exempt up to 20 percent of the assessed value of the aforementioned single-family property. If this were done and there were no compensating increase in the tax rate to replace the foregone revenue (alternative 1 in the table), the homeowners' tax bill would be \$3,954.4 million, a \$988.6 million decrease. The tax bill for other properties would remain the same. The decrease in revenue for homeowner property would result in an overall reduction in revenue of 12.9 percent, a hefty decrease.

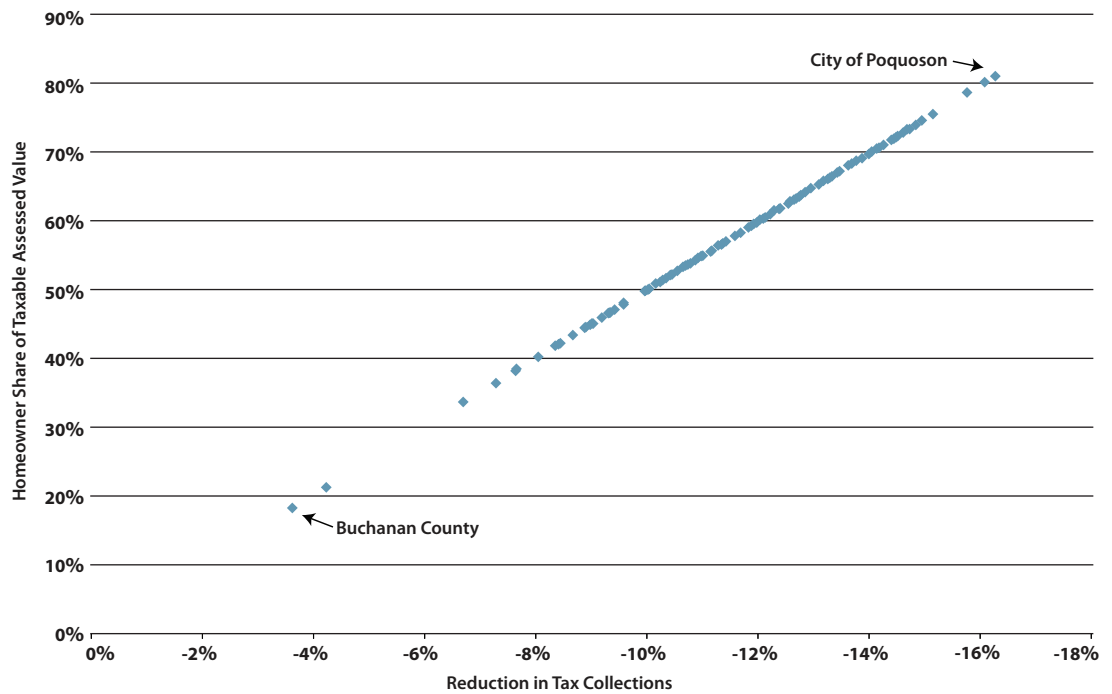

If the local governing bodies wanted to restore the lost revenue, they could do so by increasing the tax rate so that the total revenue

*The type of exemption that would be adopted by individual localities is unknowable.*

*Local governments  
would not be  
evenly affected*

**Figure 2: Homeowner Share of Assessed Value and Reduction in revenue if Exemption Were 20 Percent in All Cities and Counties, 2006**

Source: See table 2.

would be the same as before the homestead exemption (alternative 2 in the table). This could be achieved by increasing the rate from \$0.85 per \$100 of assessed value to \$0.97. Homeowners then would have a tax bill of \$4,552.5 million, an amount 7.9 percent less than before the exemption. All other property would have a tax liability of \$3,084.5 million, an amount 14.5 percent more than before the exemption. Homeowners would now pay 59.6 percent of total real property taxes, *down* from 64.7 percent before the homestead exemption. All other property would pay 40.4 percent of the tax bill, *up* from 35.3 percent before the exemption

Local governments would not be evenly affected by the homestead amendment if it were fully implemented. For localities with a large portion of their taxable assessed value in homeowner property, the percentage revenue loss would be much greater than for those with a small proportion (**Figure 2**). The locality with the highest ratio of homeowner property, the city of Poquoson with 81 percent, would experience a 16.2 percent reduction in total revenue. In contrast, the locality with the lowest ratio of homeowner property, mountainous Buchanan County, where homeowners accounted for only 18 percent of assessed value, would experience a 3.7 percent decline.

### Related Concerns

Aside from the possible effects of the homestead exemption, localities face a difficult situation in the next few years because of the poor housing market. The localities that will be under the greatest pressure in tax years 2008 and 2009 will be the 31 cities and 26 counties that reassess annually or biennially.<sup>7</sup> The assessed values on their books represent valuations made toward the end of the housing boom. This group includes all of the major cities and all of the large, urban counties. The localities with less frequent assessment cycles will not be as stressed even if they are scheduled for reassessment in 2008 or 2009 because in most cases, residential property values will be higher than the last reassessment, even if market values have fallen in recent years

As part of the 2007 Transportation Act the General Assembly empowered cities and counties in the Northern Virginia Transportation Authority (NVTA) and the Hampton Roads Transportation Authority (HRTA) to impose a surtax on commercial and industrial property not to exceed \$0.25 per \$100 for the NVTA and \$0.10 for the HRTA provided that the revenue is used for transportation purposes benefiting the locality imposing the tax.<sup>8</sup> The city of Alexandria

<sup>8</sup> House Bill 3202, 2007 Session. See Section 58.1-3221.2 <http://leg1.state.va.us/cgi-bin/legp504>.

and the counties of Arlington and Fairfax have adopted ordinances needed if the extra tax is imposed, but no rate has been set yet.<sup>9</sup>

This new provision, combined with the homestead amendment, if adopted, will establish a higher tax rate on commercial and industrial property than on other types of property. As a result, local voters will perceive their tax cost of local government initiatives to be lower than when all property was taxed at the same rate. Voters will see part of the tax burden as being shifted to commercial and industrial property. It is possible that many businesses will be resigned to such property classification because of perceived benefits from money raised for transportation and the inability to change location because of loss of customers if the business were moved to a different jurisdiction. However, there may be some existing businesses that would seek a lower tax jurisdiction and some potential businesses that would be deterred because of the higher taxes.

## Conclusion

The proposed homestead amendment would represent a major change in Virginia local government finance since it is aimed at the real property tax, the most important single source of locally raised revenue. Although the analysis in this article pertains to cities and counties, the amendment would also have a significant impact on town finances. Given the large rise in property tax levies during most of the new century, it is not surprising that taxpayer frustration has found its way into the proposed amendment. It is unfortunate that a simpler solution—restraint on spending by local government—was not adopted. Instead, market-driven increases in assessed values were used to bring in significant amounts of new revenue.

In 2006, more than a quarter of Virginia households were renters.<sup>10</sup> The homestead amendment would provide no relief to renters even though a major portion of property taxes on rental property is shifted to them.

An alternative to the proposed amendment would be a state-financed circuit breaker that could be designed to provide tax relief to low-income households that are homeowners

or renters.<sup>11</sup> Another consideration is that as the revenue-raising power of the property tax is diminished, the pressure to allow local governments a new source of revenue, such as a local income tax, will increase.

Should the amendment become part of the Constitution, the General Assembly should pass enabling legislation that is devoid of many special provisions regarding length of residence, household income, and other factors that could add to the complexity and cost of local tax administration. Whatever exemption a local government adopts will have a ratchet effect—once established it will not be reversed.

Differential taxation of property not covered by the homestead exemption may convey an unwanted message about the tax friendliness of Virginia's local tax system, especially if the implementation of special surtaxes on commercial and industrial property for funding transportation projects spreads.

As noted, the earliest that the amendment could be implemented would be 2009. Housing market turmoil, which is currently having a very negative effect on property tax collections, is unlikely to be over at that time. Thus, the amendment will exacerbate an already difficult time for local governments.
